DETAILED ACTION

Election/Restrictions

Applicant's election of Group I and further the species of claims 1-13 in Paper No. 6 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 14-47 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention and species, there being no allowable generic or linking claim. Election was made without traverse in Paper No. 6.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Sweezer et al.

Sweezer discloses a catheter system and method for providing cardiopulmonary bypass pump support during heart surgery that includes a delivery conduit (19) with an occlusion balloon (27), a collection conduit (1) with an occlusion balloon (6), a driving force (33) in communication with the delivery conduit, and an inflation/deflation control mechanism (43). The balloons are contractable. The perfusion fluid includes cardioplegia solution (chemotherapeutic chemicals).

Application/Control Number: 09/475,768

Art Unit: 3763

Claims 3-4, 9 and 11 contain language regarding the functioning of the instant invention. The device as taught by Sweezer is capable of performing the recited functions. Specifically, the delivery conduit is capable of administering fluid during a substantial period of diastole or systole. The inflation/deflation control mechanism is capable of expanding the balloon during diastole and contracting the balloons during systole. The delivery conduit is capable of being positioned in the aorta and the collection conduit is capable of being positioned in the coronary sinus.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Catherine Serke whose telephone number is 703-308-4846. The examiner can normally be reached on Monday - Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian Casler can be reached on 703-308-3552. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9302 for regular communications and 703-872-9303 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-2192.
